

68RFE Billet Channel Plate Instructions

This kit fits ONLY 2007.5-2018 valve bodies. If you need a plate for a 2019+ valve body, please use our 68RFE-324. This kit will work with any OEM or aftermarket filter.

Installation Options:

Option 1: For stock applications (those with no transmission tuning desiring increased line pressure) please install the provided M5x5mm Torx screw as shown in Figure 1. Failure to installing this screw may result in erratic line pressure and associated trouble codes.

Option 2: For non-stock applications (Use with any transmission tuning calling for additional line pressure). Do NOT install the M5x5mm screw. Installing this screw will limit the line pressure to 160psi and can cause low line pressure trouble codes. In order to get additional line pressure, you will need to use a modified separator plate (RevMax Part # 68RFE-302 or 68RFE-303) as well!

Follow the factory torque specifications and all other factory installation instructions.
